JasserNahali

Software Engineer | Backend, Distributed Systems & Cloud Platforms

Jasser.Nahali@esprit.tn | +216 29 523 985 Tunis, Tunisia | linkedin.com/in/jasser-nahali | github.com/Jasser1920 | jasser-nahali.netlify.app

English (C1) · French (B2)

Developed secure application environments and real-time data sync systems, optimizing execution pipelines to sustain sub-100ms latency under load.

Technical Skills

Backend & Microservices : Java, Spring Boot, Node.js, Fastify, Nest.JS, .NET / C#, RESTful APIs, WebSockets, Socket.io
Cloud, DevOps & Containers : Docker, Kubernetes, Jenkins CI/CD, GitLab CI/CD, SonarQube, Grafana, Nginx, Linux
Programming Languages: TypeScript, JavaScript, Python, Java, Go, SQL, C++
Databases & Persistence: PostgreSQL, MySQL, SQL Server, MongoDB, Prisma ORM, Entity Framework
Frontend & Web Technologies: React 18, Next.js 15, Angular, Tailwind CSS, Monaco Editor, HTML5/CSS3
Security & Standards : Keycloak (OAuth2/JWT, RBAC), Automated Unit/E2E Testing, Git, Postman, Agile/Scrum

Professional Experience

Software Developer Intern — 06/2026 – 08/2026
Medianet – Code-Dual: Real-Time Competitive Coding Engine — Tunis, Tunisia

- Architected a bidirectional code editor using Monaco Editor and Socket.io on Fastify, synchronizing code and cursor states with sub-100ms latency across 20+ concurrent active duels.
- Built an isolated execution sandbox wrapping Judge0 on Docker, safely running automated tests across 6 languages (Go, Python, Java, C++, Rust, JS) with execution times under 1.5 seconds.
- Modeled the relational persistence schema in SQL Server with Prisma ORM and achieved 80% unit test coverage across core backend modules.

Full-Stack Developer Intern — 07/2025 – 08/2025
Hendrik Thurau Enterprises – KiddySafe: Real-Time Family Safety Platform — Switzerland (Remote)

- Engineered cross-platform services with React Ionic and Next.js, building 12 REST API endpoints that processed continuous location updates from mock GPS streams.
- Implemented a WebSocket event pipeline delivering emergency SOS notifications to connected guardian dashboards in under 300ms.
- Containerized application microservices using Docker and authored Kubernetes manifests to manage local pod restarts within an international Agile team.

Full-Stack Developer — 01/2025 – 02/2025
Freelance – Nutriwell Store: High-Performance E-Commerce Engine — Tunisia

- Developed a decoupled e-commerce application (React 18, Vite, Fastify) managing a dynamic catalog of 50+ items and order states via PostgreSQL and Prisma ORM.
- Optimized RESTful checkout and cart validation routes, achieving average local API response times below 120ms .

Education

ESPRIT (School of Engineering and Technology) — 2024 – Present
National Engineering Degree in Computer Science (Web & Cloud) — Tunis, Tunisia

Projects

Job Outreach Suite | LLM-Powered Workflow Automation | Next.js 15, TypeScript, APIs — 2026

- Architected an open-source Next.js 15 platform integrating Gemini AI APIs with Hunter.io scrapers, validating hiring manager contact records with average lookup times under 2 seconds and generating concise outreach templates bounded strictly to ≤10 lines.

SmartSite | AI-Powered Operations & Telemetry Platform | K8s, NestJS, Python, YOLOv8 — 2024

- Engineered an event-driven telemetry platform coupling NestJS with Python/FastAPI microservices processing video streams at 20–25 FPS for YOLOv8 violation detection, deploying containerized pods across a 3-node Kubernetes cluster with automated Jenkins CI/CD, SonarQube quality gates, and Keycloak RBAC over 4 user tiers.
